

Training Operators for Improving Productivity and Safety at South-West Mines

Situated in Barmer, Rajasthan, TecknoSIM Mobile Simulator Training Center is preparing mining operators at South-West Mining Limited.

The 40 ft Container Simulator is divided into 2 sections : the simulator room and training center . The simulator room is equipped with an advanced TecknoSIM Tipper Truck Simulator

with convertible kits for tippers including

Scania P410, LGMG (MT86) & Volvo 480.

Convertible kits are interchangeable kits that fit onto base simulator platforms allowing a range of equipments from different OEMS to be simulated on the same machine. Convertible kits allows the users to use mutiple simualtors with the same simulator setup. The second room is the training center that is equipped with a viewing station situated outside the simulator room. While one

operator trains on the simulator , the veiwing station allows the all other trainees to view the simulator scenarios and learn passively. Viewing station is excellent for group training purposes.

The instructor station with the simulator allows the intructor to monitor the operator's performance in real time. The scenario setting tool in the simulator helps the intructor to set different virtual training situations for different trainers . It introduces them to equipment operations and prepares them for emergency situations on actual mines .

The South-West Mines investment in its people and safety is of the highest level and Tecknotrove is honored to be part of that vision.
