## TRAINING SERVICES

Shaping the future  
of training...

*“Discover the training solutions that are advanced and easily customized, maintained and upgraded to meet your organization's training requirements.”*

## ABOUT US

TecknoSIM Training Services specializes in providing advanced training solutions to the Automotive, Transportation and Logistics industry. Our programs are designed to train people and develop their skills as per the industry needs.

The structure of our courses & our methodology allows us to custom design each module to specific client requirement and industry groups. Use of training aids like classroom sessions, training videos, scientific testing systems & advanced training simulators make the training experience realistic and effective. Our training programs are developed by industry experts and conducted by qualified trainers.

***“Our goal is to continuously find better ways to train people, improve safety & increase productivity.  
- This is our PASSION”***

# Our Services

## Driver Training

TecknoSIM driver training programs are designed to improve driving skills, induce safe driving habits & increase efficiency of the drivers ensuring that your fleet is operating at the highest level possible. Our training methodology includes providing customized training solutions, with a combination of hands-on training, classroom sessions and simulation based training run by trained instructors. A computerized assessment system and defined certification process makes it a career enhancer for the trainees. Driver Training Programs are available for Tankers, Trailers, Haz-Chem vehicles, Cold Chain trucks, Forklift operators, Mixers, Earthmoving Equipment operators

**Training Programs:** Defensive Driver Training | Fuel Management Training | Fatigue Management | Road Safety Rules | Dangers of Distracted Driving

## Automotive Training

### Service | Body Paint | Production

The Automotive Training Program provide students an organized learning platform along with actual shop training experience, to equip them with the necessary knowledge and experience to manufacture vehicles, diagnose and repair real automotive problems or learn auto body painting.

The combination of both classroom theory and hands-on training offers the auto student the appropriate experiences that are required for entry-level Auto Jobs. This program prepares students to engage in the manufacturing, servicing and maintenance of all types and makes of cars. The training curriculum is built based on the industry requirement and needs. The programs are designed in mind keeping the limited educational background & understanding levels of trainees in India.

## Transport Management Center

Transport Management Center is a technology based center, that ensures that your drivers are skilled and fleets are operating at the highest level possible. Transport Management Center is deployed at your facility, equipped with advanced training and testing systems such as Driving Simulators, Clinical testing stations and Data analysis systems.

### TMC services include:

- Driver screening & assessment
- Driver Orientation
- Journey Planning and Monitoring
- GPS Data Analysis and Feedback
- Driver Briefing and Counseling
- Driver Skilling – Pulse Training
- Vehicle Audits
